

Printing peripheral series

EB-200HC Flame treatment machine

Product Details

1. Mainly used for the surface pretreatment of PE and PP plastic products;
2. Micro motor imported from Japan, stepless speed timing mode is adequate for different workpiece requirement;
3. The machine is two sides equipped with baffle-boards to improve the heat efficiency;
4. Advanced gushing nozzle is design generates a good combustion result, it is a product that saves energy;
5. According to the size of your product that is to be printed, replace the taper support to meet the different requirement of workpiece.

Flame width	200MM
Fuel gas	standard liquefied gas
Power supply	220V/50Hz
Dimensions	1500Å—480Å—1200 mm
