

## Printing peripheral series

EB-300YHCA

### Product Details

The machine is mainly used for the surface flame treatment of various cylindrical PE and PP plastic products. The molecular structure for the surface of substrate treated by the machine is changed so that the print ink adherence is improved.

|              |                        |
|--------------|------------------------|
| Flame width  | 200 mm                 |
| Fuel gas     | standard liquefied gas |
| Power supply | 220 V/50hz             |
| Dimensions   | 800Å—1000Å—1000 mm     |
